Sample Game Testing Reports

Submitted by: Aryan Deshpande

BUG REPORT 1

Game: Grand Theft Auto: San Andreas

Bug Title: Clothing Stores Unlock Prematurely When Jetpack Cheat Used During Intro Sequence

Environment: PC, Single Player Mode, New Game Start

Steps to Reproduce:

1. Start a new game.
2. During the opening sequence when CJ is in the police car with Officer Tenpenny and others, enter the cheat code “ROCKETMAN”.
3. Continue the sequence until CJ is dropped in the alley and screen flashes WASTED.
4. Then again, the sequence starts from the beginning, don’t do anything just let the sequence continue until CJ is dropped in the alley and gameplay begins.
5. Visit clothing stores across different regions of the map.

Expected Result:

Only early-game clothing stores (such as Binco in Los Santos) should be accessible based on game progression.

Actual Result:

All clothing stores, including those intended for late-game progression (such as Victim and Didier Sachs), are unlocked and accessible from the beginning.

Severity: High

Frequency: Always reproducible when cheat is used during the intro sequence

Notes: This issue appears to be caused by activating the cheat during a scripted sequence, which may interfere with progression flags and unlock conditions.

BUG REPORT 2

Game: Grand Theft Auto Online

Bug Title: NPC Dialogue Trigger Persists After Target Elimination in Prep Mission

Environment: PC, Online Mode, Chop Shop DLC - Podium Robbery Prep Mission

Steps to Reproduce:

1. Start the Podium Robbery prep mission.
2. Locate the valet NPC at his residence.
3. Instead of threatening, eliminate the valet NPC.
4. Collect the security keycard and exit the location.

Expected Result:

No dialogue or event should indicate that the valet has alerted the police, as the NPC has already been eliminated.

Actual Result:

A dialogue trigger occurs indicating that the valet has contacted the police, resulting in a wanted level, despite the NPC being dead.

Severity: Medium

Frequency: Consistent

Notes: The issue suggests that the dialogue/event trigger does not validate the NPC's state (alive or dead), leading to a logical inconsistency in mission flow.

Note: These reports are based on personal gameplay observations and are documented to demonstrate structured testing, analytical thinking, and clear communication of issues.
